Anti MOUSE™ Mini-Sonic® MOUSE REPELLENT

Product Code STV826/STV828

V119

Installation

Simply plug the Mini-Sonic® Mouse Repellent into a standard 220-240V AC 3-pin UK outlet in the area affected by mice. Once the socket is switched on the unit will run a self-test and a succession of four short audible beep tones indicate that it has activated and is working correctly.

To Maximise The Performance

Leave the unit operating continuously for 24hr protection.

Make sure food is stored out of reach of rodent pests.

Find and repair any openings where rodent pests can get in.

Avoid installing the unit in areas where furniture and other household items may obstruct the ultrasonic signal.

For large or irregular shaped treatment areas, more than one unit may be required.

Important

This appliance contains no user serviceable parts. Do not tamper with or try to open the unit in any way. For indoor use only.

Do not cover the unit or place it near direct sources of heat such as radiators, cookers and other appliances, including refrigerators. Do not use the unit if there are signs of damage.

Caution

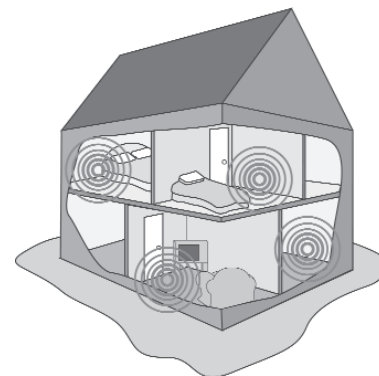

Do not use Mini-Sonic® Repellent unit around rodent pets such as hamsters, gerbils, guinea pigs, rabbits etc.

How Does The Mini-Sonic® Work?

The unit emits powerful sound waves at a frequency that rodent pests can hear but which are not audible to humans.

Rodents are disturbed by the ultrasound and will move out of the treatment area.

What Areas Will The Unit Protect?

A single unit will protect one treatment area. For large or irregular shaped treatment areas, more than one unit may be required. Living areas and buildings with hard surfaces are ideal environments in which to use the Mini-Sonic® Mouse Repellent. They can also be used in rooms with soft furnishings, however be careful not to obstruct the line of sight from the unit.
